

Lecture 10 - Exception Handling

28 November 2023 07:37

* Try block - code which might result in an exception

* Catch block - handles exception in case it occurs

* Finally block - this block will execute even if there is exception or not.

Eg `try { int i = 10/0; }`

`catch (Exception e) {
System.out.println("Divide by zero issue");
}`

`finally {` → optional

`System.out.println("Finally block called");
}`
